

Capability Statement

Microsoft 365 and Azure Government consulting for federal contractors, primes, agencies, and state/local customers.

JAMN Ventures, LLC dba Privion

As of August 8, 2026

Small Business · SAM.gov All Awards

Company overview

Privion (JAMN Ventures, LLC) is a small business Microsoft partner delivering senior-led Microsoft 365, SharePoint, Azure Government, and custom application work inside client Government tenants. Microsoft has validated Privion as a Category 2 and Category 3 entity for the US Government Community Cloud—covering solution providers and organizations handling government-controlled data including CUI and ITAR-regulated information. Engagements are consulting and delivery in the client's environment—not hosted Privion products in government cloud. Privion teams with primes and federal contractors as a small business subcontractor, and works directly with agencies and state/local customers.

MS Gov	Category 2 and Category 3 · Validation ID 232204
Address	12481 High Bluff Drive, Suite 300, San Diego, CA 92130

Core competencies

01 — Microsoft 365 Government migration and modernization

Tenant planning, migration, and configuration for GCC and GCC High. Twenty years of Microsoft 365 delivery applied to the isolation and compliance constraints federal contractors and agencies actually face.

02 — SharePoint and intranet delivery

Information architecture, SPFx development, and employee experience work inside government tenants. Over 100 intranets built—useful when primes need digital workplace scope executed, not bid-ware.

03 — Azure Government architecture

Landing zones, network design, identity, and cost optimization on Azure Government for contractor and agency workloads that must stay in the government cloud boundary.

04 — Fractional CTO for contractor IT

Roadmap ownership, build-versus-buy, and architecture review for contractors standing up or maturing a Microsoft-centric technology function without a full-time executive hire.

05 — Systems integration and custom applications

APIs, middleware, data pipelines, and line-of-business applications built to operate within government cloud boundaries and contractor security requirements.

Differentiators

- Validated Microsoft Government Cloud Category 2 and Category 3 (Validation ID 232204)—relevant for contractors handling CUI/ITAR-class data and for providers serving U.S. Government entities.
- Active SAM.gov registration for All Awards (expires July 20, 2027); UEI and CAGE ready for subcontract setup.
- Delivery inside the client's Microsoft 365 Government tenant (GCC/GCC High), including municipal GCC environments.
- Twenty years of Microsoft 365 experience; more than 100 intranets delivered.
- Lean, principal-led teams—architecture and hands-on engineering from the same people.

How we engage

Work happens in the client's Microsoft Government tenant. Client data stays there. Privion's hosted products run in commercial Azure only and are not offered for government cloud. For primes and federal contractors, Privion is a small business subcontractor for digital workplace and Azure Government scope.

Privion hosted services (LightPath Intranet supporting services and PAnalytics) run in commercial Azure West US 2 and are not offered in Microsoft Government cloud. Government engagements are consulting and delivery work performed inside the client's own Microsoft 365 Government tenant.

Microsoft Government Cloud note

Category 2 covers solution providers doing business with U.S. Government entities—federal, state, and local. Category 3 covers organizations handling government-controlled data including CUI and ITAR-regulated information, which is why defense and federal contractors qualify for Microsoft Government cloud. Validation establishes eligibility to purchase and operate in those environments (GCC and related offers). It is not a security certification, FedRAMP authorization, or CMMC assessment.
